# Operating Systems 2018-2 (Room 3114)

## R/M (Tu/Th 13-15) | I (Tu/Th 15-17)

| Week     | Schedule             | Topic                                       | OSC10                               |
|----------|----------------------|---|-------------------------------------|
| Week 00  | 04 Sep - 12 Sep 2018 | Overview 1, Virtualization & Scripting      | Ch. 1, 2, 18.                       |
| Week 01  | 13 Sep - 19 Sep 2018 | Overview 2, Virtualization & Scripting      | Ch. 1, 2, 18.                       |
| Week 02  | 20 Sep - 26 Sep 2018 | Security, Protection, Privacy, & C-language | Ch. 16, 17                          |
| Week 03  | 27 Sep - 03 Oct 2018 | File System & FUSE                          | Ch. 13, 14, 15                      |
| Week 04  | 04 Oct - 10 Oct 2018 | Addressing, Shared Lib, & Pointer           | Ch. 9                               |
| Week 05  | 11 Oct - 17 Oct 2018 | Virtual Memory                              | Ch. 10                              |
| Reserved | 18 Oct - 19 Oct 2018 |   |                                     |
| Mid-Term | 24 Oct 2018          | MidTerm (UTS): 09:00 - 11:30                |                                     |
| Week 06  | 30 Oct - 05 Nov 2018 | Concurrency: Processes & Threads            | Ch. 3, 4                            |
| Week 07  | 06 Nov - 12 Nov 2018 | Synchronization & Deadlock                  | Ch. 6, 7, 8                         |
| Week 08  | 13 Nov - 21 Nov 2018 | Scheduling                                  | Ch. 5                               |
| Week 09  | 22 Nov - 28 Nov 2018 | Storage, BIOS, Loader, & Systemd            | Ch. 11                              |
| Week 10  | 29 Nov - 05 Dec 2018 | I/O & Programming                           | Ch. 12                              |
| Reserved | 06 Dec - 14 Dec 2018 |   |                                     |
| Final    | 19 Dec 2018          | Final (UAS): 09:00 - 11:00                  | This schedule is subject to change. |
| Extra    | 12 Jan 2019          | Extra assignment                            |                                     |

# The Weekly Check List

- ☐ **Resources:** <https://os.vlsm.org/>
  - ☐ **(THIS) Slides** — <https://github.com/UI-FASILKOM-OS/SistemOperasi/tree/master/pdf/>
  - ☐ **Demos** — <https://github.com/UI-FASILKOM-OS/SistemOperasi/tree/master/demos/>
  - ☐ **Extra** — [BADAK.cs.ui.ac.id:///extra/](http://BADAK.cs.ui.ac.id:///extra/)
  - ☐ **Problems** — [rms46.vlsm.org/2/195.pdf](http://rms46.vlsm.org/2/195.pdf), [196.pdf](http://rms46.vlsm.org/2/196.pdf), ..., [205.pdf](http://rms46.vlsm.org/2/205.pdf)
- ☐ **Text Book:** any recent/decent OS book. Eg. **(OSC10)** Silberschatz et. al.: **Operating System Concepts**, 10<sup>th</sup> Edition, 2018.
- ☐ Encode your **QRC** with size upto 7cm x 7cm (ca. 400x400 pixels):  
"OS182 CLASS ID SSO-ACCOUNT Your-Full-Name"
- ☐ For **Week 00**, send your **embedded QRC before the 2<sup>nd</sup> lecture**  
<mailto:operatingsystems@vlsm.org>  
With Subject: OS182 CLASS ID SSO-ACCOUNT Your-Full-Name
- ☐ Write your Memo (with QRC) **every week**.
- ☐ Login to [badak.cs.ui.ac.id](http://badak.cs.ui.ac.id) via [kawung.cs.ui.ac.id](http://kawung.cs.ui.ac.id) for at least **10 minutes** every week. Copy the weekly demo files to your own home directory.  
Eg. (Week00): `cp -r /extra/Week00/W00-demos/ W00-demos/`

# Agenda

- 1 Start
- 2 Schedule
- 3 Agenda

- 5 Highlights
- 6 Week 00
- 7 Assessment
- 8 Week 00: Review
- 9 Assignment #0 (W00)
- 10 Assignment #1 (W00)
- 11 Assignment #2 (W00)
- 12 TIPS

# Agenda (2)

- 13 Week 00: Summary
- 14 Week 00: Check List
- 15 Week 00
- 16 Week 01
- 17 Week 02
- 18 Week 03
- 19 Week 04
- 20 Week 05
- 21 Week 06
- 22 Week 07
- 23 Week 08
- 24 Week 09
- 25 Week 10
- 26 The End

# How to contact the Lecturer<sup>2</sup>

- For Q & A, use WhatsApp Group **OperatingSystems**  
(info +62-881-456-XXXX)  
Email (Subject:[**HELP**]) [operatingsystems@vlsm.org](mailto:operatingsystems@vlsm.org)

Figure: Never ever whine and pretend like this<sup>1</sup>!

---

<sup>1</sup>"Puss in Boots" is a DreamWorks/Paramount Picture character.

<sup>2</sup>FYI: King Goerge II founded the University of Goettingen in 1734.

# Highlights

## Coverage

This is an introduction to a modern operating systems course. It will cover general overview, computer architecture review, operating system overview, GNU/Linux CLI, scripting, C language overview, protection, security, privacy, systemd, I/O, addressing and pointers, memory management, processes and threads, virtual memory, synchronization, mutual exclusion, deadlock, CPU scheduling algorithms, file systems, and I/O programing.

## Student-Centered

This course is student-centered where responsibility is in the hands of the students. Students are expected to be prepared for the class meeting.

## GNU/Linux

Students will have a thorough understanding of how GNU/Linux provides services by using a Command Line Interface.

# Week 00 Overview I: Topics<sup>1</sup>

- Role and purpose of the operating system
- Functionality of a typical operating system
- Mechanisms to support client-server models, hand-held devices
- Design issues (efficiency, robustness, flexibility, portability, security, compatibility)
- Influences of security, networking, multimedia, windowing systems
- Structuring methods (monolithic, layered, modular, micro-kernel models)
- Abstractions, processes, and resources
- Concepts of application program interfaces (APIs)
- The evolution of hardware/software techniques and application needs
- Device organization
- Interrupts: methods and implementations
- Concept of user/system state and protection, transition to kernel mode

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 00 Overview I: Learning Outcomes (1)<sup>1</sup>

- Explain the objectives and functions of modern operating systems [Familiarity]
- Analyze the tradeoffs inherent in operating system design [Usage]
- Describe the functions of a contemporary operating system with respect to convenience, efficiency, and the ability to evolve. [Familiarity]
- Discuss networked, client-server, distributed operating systems and how they differ from single user operating systems. [Familiarity]
- Identify potential threats to operating systems and the security features design to guard against them. [Familiarity]
- Explain the concept of a logical layer. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 00 Overview I: Learning Outcomes (2)<sup>1</sup>

- Explain the benefits of building abstract layers in hierarchical fashion. [Familiarity]
- Describe the value of APIs and middleware. [Assessment]
- Describe how computing resources are used by application software and managed by system software. [Familiarity]
- Contrast kernel and user mode in an operating system. [Usage]
- Discuss the advantages and disadvantages of using interrupt processing. [Familiarity]
- Explain the use of a device list and driver I/O queue. [Familiarity]

---

|              |              |              |                               |
|--------------|--------------|--------------|-------------------------------|
| 85 - ... = A | 80 - 85 = A- | 75 - 80 = B+ | 70 - 75 = B                   |
| 65 - 70 = B- | 60 - 65 = C+ | 55 - 60 = C  | 50 - 55 = D or C <sup>1</sup> |
| 40 - 50 = D  | 30 - 40 = E  | 20 - 30 = E  | 00 - 20 = E                   |

---

- **4 SKS** (Units) = 12 hours per week!
- **No Lab — No Task — No Pop Quiz – No Teaching Assistant.**
- **Active Preparation / Participation / Q&A Only.**
  - Pre-Midterm (UTS): 6 weeks @ 3 points (=18%).
  - Post-Midterm: 5 weeks @ 3 points (=15%).
  - Points for answering questions, trying demos, and writings memos.
  - Deductions for **NOT** answering questions: individually or collectively.
- **MidTerm+Final:** (6 + 5) set problems @ 6 points ( = 36% + 30%).
- **Extra Rounding:** 1 point<sup>1</sup> or **C-2C:** upto 5 points<sup>1</sup>.
- Check your points regularly at <https://academic.ui.ac.id/> and **DO NOT COMPLAIN** weeks after!

<sup>1</sup>Terms and Conditions apply. Void where prohibited by law.

# Week 00: Review

- What is an Operating System?
- Why taking an Operating System class?

# Computer Organization Review

- You should understand:
  - von Neumann Model.
  - Buses, Bridges, Transfer Rate, Clock.
  - Memory: DDR, DDR-2, DDR-3 ...
  - Cache, Buffer, Spool, & Pipelining.
  - Direct Memory Access (DMA).
  - Port & Memory Mapped I/O.
  - CPU: (privilege/kernel/supervisor mode) vs. (user mode).
  - Physical (Hardware) Limitation.
  - Priority: Read vs Write.
  - Interrupts: Polling & Vectored.
  - Multiprocessors: Symmetric vs. Asymmetric.
  - Multicore & Multithreading.
  - Clustered Systems.
  - Numbers: base 2, base 8, base 10, base 16.
    - Base 2:  $110010101010_2$
    - Base 8:  $01234567_8 = 000\ 001\ 010\ 011\ 100\ 101\ 110\ 111_2$
    - Base 10:  $012\ 345\ 679$
    - Base 16:  $9AB\ CDEF_{16} = 1001\ 1010\ 1011\ 1100\ 1101\ 1110\ 1111_2$

# APIC (Advanced Programmable Interrupt Controller)

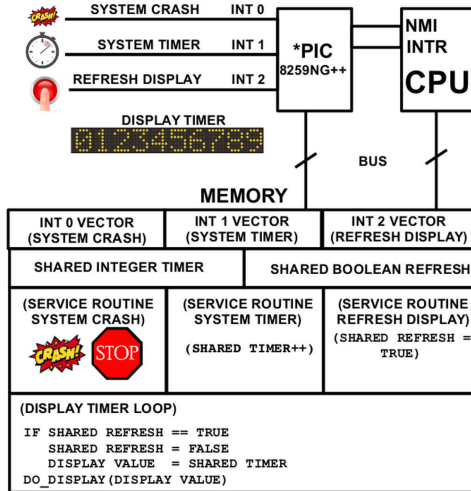

Figure: APIC (Advanced Programmable Interrupt Controller)

# Interrupt Handling

(c) 2017 VauLSMorg – This is a free picture

**Figure:** Interrupt Handling with PIC (Programmable Interrupt Controller)

# Managers Set

- Process:
  - Creating/Deleting; Suspending/Resuming; Synchronization; Communication; Scheduling
- Memory:
  - Tracking; Move In/Move Out; Allocating/Deallocating.
- Storage/File System:
  - Create/Delete; Open/Close; Read/Write.
- Mass Storage:
  - Scheduling; Allocating; Free Space.
- I/O:
  - Buffering; Caching; Spooling.
  - Interfacing (driving).
- Protecting & Security:
  - Protecting.
  - Security.

# Make sure, to understand:

- Scripting: bash, regex, sed, awk?
- Security and Protection?
- File System?
- Data Structure in a (logical) Memory?
- Virtual Memory
- Concurrency
- Synchronization
- Mass Storage
- UEFI, GRUB, and systemd
- I/O
- I/O Programming

# Assignment (W00) #0: Generate your QR Code

- Encode your **QRC** with size upto 7cm x 7cm (ca. 400x400 pixels): (see next slide):

**"OS182 CLASS ID SSO-ACCOUNT Your-Full-Name"**

- What year and term? Eg. 2018 – 2 → "OS182"
  - What is your OS class? Regular (A, B, C, D)? Or, Extension (E)? Or, International (I)? Or Matrix (M)? Or, Other (X)? Eg. "X".
  - What is your Student ID (NPM)? Eg. "1253755125".
  - What is your SSO Account (for using badak.cs.ui.ac.id)? Eg. "demo".
  - What is your Full Name (at SIAK)? Eg. "Demo Suremo".
- E.g.: **OS182 X 1253755125 demo Demo Suremo**

# QR Code

- How to generate a QR Code: <http://goqr.me/>

**1. Type** text

**2. Contents**

Text

05182 X 1253755125 demo Demo Suremo

EPS

Size

400

Download QR Code as

PNG

JPEG

Note: You can use the QR code completely free of charge (commercial and print usage allowed).

- Do not forget to **test** (SCAN) your QR Code!

- Special for **Week 00**, mail your **embedded** QRC  
<mailto:operatingsystems@vlsm.org>
  - Subject: OS182 CLASS ID SSO-ACCOUNT Your-Full-Name
  - E.g.: OS182 X 1253755125 demo Demo Suremo
  - Insert your QR Code (**embedded**). **DO NOT ATTACH!**
  - Send it **BEFORE** the next lecture.

- **NOTE:** Your Student ID (NPM) is the most important information!

# Assignment (W00) #1: MEMO Week00

- Write your Memo (with QRC) **every week**.

[OS182][WEEK. 00 01 02 03 04 05 06 07 08 09 10]

[CLASS: A B C D E I M (X)] [ID: 1253755125] [Name: Demo Suremo] [Rev: 07]

$$\begin{aligned} | \langle x, y \rangle | &\leq \|x\| \|y\| \\ \frac{d\vec{v}}{dt} &= \vec{a} & \frac{d\vec{x}}{dt} &= \vec{v} \\ d\vec{v} &= \vec{a} dt & \frac{d\vec{x}}{dt} &= (\vec{v}_0 + \vec{a}t) \\ \int d\vec{v} &= \int \vec{a} dt & \frac{d\vec{x}}{dt} &= (\vec{v}_0 + \vec{a}t) \\ \vec{v} &= \vec{v}_0 + \vec{a}t & d\vec{x} &= (\vec{v}_0 + \vec{a}t) dt \\ & & \int d\vec{x} &= \int (\vec{v}_0 + \vec{a}t) dt \\ & & \vec{x} &= \vec{x}_0 + \vec{v}_0 t + \frac{1}{2} \vec{a} t^2 \end{aligned}$$

$$\begin{aligned} \hat{H}|\psi_n(t)\rangle &= i\hbar \frac{\partial}{\partial t} |\psi_n(t)\rangle \\ \frac{1}{c^2} \frac{\partial^2 \phi_n}{\partial t^2} - \nabla^2 \phi_n + \left(\frac{mc}{\hbar}\right)^2 \phi_n &= 0 \\ \hbar \frac{\partial}{\partial t} s &= s / \hbar \frac{\partial}{\partial t} s = p_i o s_{ji=1, \dots, k} \\ f(Q_i) &= \sum_{d_i=1}^{\infty} \frac{(2d_i-1)!}{(d_i!)^2} Q_i^{d_i} \\ d(x, z) &\leq d(x, y) + d(y, z) \end{aligned}$$

$$\begin{aligned} \frac{d\vec{v}}{dt} &= \vec{a} & \frac{d\vec{x}}{dt} &= \vec{v} \\ d\vec{v} &= \vec{a} dt & \frac{d\vec{x}}{dt} &= (\vec{v}_0 + \vec{a}t) \\ \int d\vec{v} &= \int \vec{a} dt & \frac{d\vec{x}}{dt} &= (\vec{v}_0 + \vec{a}t) \\ \vec{v} &= \vec{v}_0 + \vec{a}t & d\vec{x} &= (\vec{v}_0 + \vec{a}t) dt \\ & & \int d\vec{x} &= \int (\vec{v}_0 + \vec{a}t) dt \\ & & \vec{x} &= \vec{x}_0 + \vec{v}_0 t + \frac{1}{2} \vec{a} t^2 \end{aligned}$$

# Assignment (W00) #2: Try Demo Week00

- Login to `badak.cs.ui.ac.id` via `kawung.cs.ui.ac.id` for at least **10 minutes** every week. Copy the weekly demo files to your own home directory.

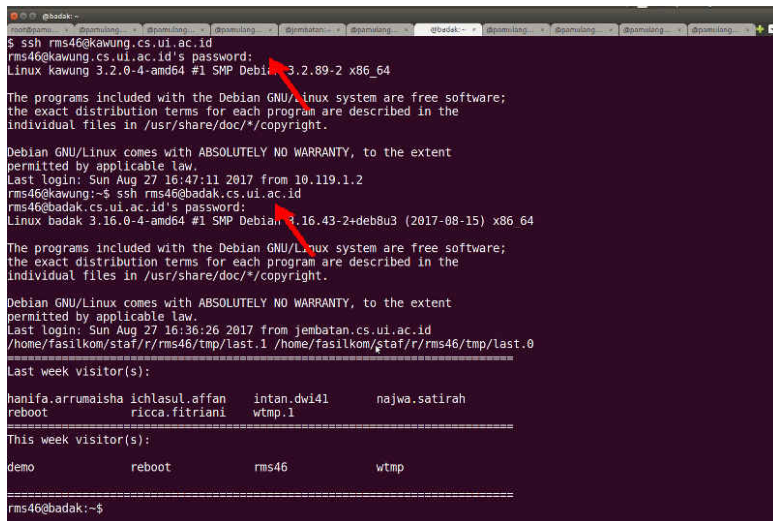

Eg. (Week00): `cp -r /extra/Week00/W00-demos/ W00-demos/`

```

# Week 00: Problem Example (from OSC2e)

Figure: T / F The advantages of a multiprocessor system include: increased throughput, economy of scale, and increased reliability (Week00 2016-1).

# TIPS (1)

- For any administrative issues, contact SEKRE at building B, 2<sup>nd</sup> floor – especially for absences, illness, sick letters, follow-up exams, etc. Please do not contact the **Lecturer** (RMS).
- Please complete the follow-up / paper work within 6 working days (RMS).
- Prepare the weekly MEMO as completely as possible. You should have mastered the material at the beginning of the week (RMS).
- Study the Operating System Concept book which deals with the material will be discussed that week (MIM). Make a summary of material in your Memo (IP).
- You should understand every single problem of the past examinations. Write down all hints in your "**MEMO**" (MHP).
- You are allowed to bring up to 6 sheets of MEMOs for the midterm (UTS) and up to 5 sheets of MEMOs for the final term (UAS) (RMS).
- You should understand every single line of the "**DEMOS**" (MHP).

## TIPS (2)

- You should ask **the lecturer** or anyone, anything you do not understand (TA).

# TIPS (3)

- TBA.

# Special Thanks

**Special thanks** for the early version of this writing to:

Anisha Inas Izdiyar (AI), Benedictus Alvin (BA), Ibnu Sofian Firdaus (ISF), Irmanpen Panjaitan (IP), Ivana Irene Thomas (IIT), Michael Giorgio Wirawan (MGW), Muhammad Afkar (MA), Muhammad Hanif Pratama (MHP), Muhammad Iqbal Mahendra (MIM), M. Ikhsan Kurniawan (MIK), Nixi Sendya Putri (NSP), Raihan Mahendra Sutanto (RM), Rizki Leonardo (RL), Shavira Adeva (SA), Stefan Mayer Sianturi (SMS), Thrisnadevany Amalia (TA), Zhelia Alifa (ZA);

# Week 00: Summary

- What is an Operating Systems?
  - Definition: Resource Allocator & Control Program.
  - Why taking an Operating System class?
- Computer Organization Review
- The Manager Set
  - Process Manager, Memory Manager, I/O Manager, Storage Manager.
- Security and Protection
- Virtualization
  - Hypervisor type 0, 1, 2
  - Paravirtualization, Emulators, Containers.
  - VCPU: Virtual CPU
  - Virtualization Implementation:
    - Trap-and-Emulate mode
    - Binary Translation mode

# Week 00: Check List

- ☐ Starting **Week 01**: TABULA RASA is not accepted anymore!
- ☐ Find/copy this document from <https://os.vlsm.org/>
- ☐ Find/read a recent/decent OS Book and map it to **OSC10**.
- ☐ Using your **SSO** account, login to `badak.cs.ui.ac.id` via `kawung.cs.ui.ac.id`.
- ☐ Check folder `badak:///extra/Week00/`
  - ☐ Try to copy and compile `c-program-example.c`.
- ☐ QR Code: (Eg) "0S182 X 1253755125 demo Demo Suremo"
- ☐ Mailto: `operatingsystems@vlsm.org`  
(Eg.) Subject: 0S182 X 1253755125 demo Demo Suremo
- ☐ Write "Memo Week00" + your QRC.
- ☐ **How to improve this document?**

# Week 00 Overview I: Topics<sup>1</sup>

- Role and purpose of the operating system
- Functionality of a typical operating system
- Mechanisms to support client-server models, hand-held devices
- Design issues (efficiency, robustness, flexibility, portability, security, compatibility)
- Influences of security, networking, multimedia, windowing systems
- Structuring methods (monolithic, layered, modular, micro-kernel models)
- Abstractions, processes, and resources
- Concepts of application program interfaces (APIs)
- The evolution of hardware/software techniques and application needs
- Device organization
- Interrupts: methods and implementations
- Concept of user/system state and protection, transition to kernel mode

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 00 Overview I: Learning Outcomes (1)<sup>1</sup>

- Explain the objectives and functions of modern operating systems [Familiarity]
- Analyze the tradeoffs inherent in operating system design [Usage]
- Describe the functions of a contemporary operating system with respect to convenience, efficiency, and the ability to evolve. [Familiarity]
- Discuss networked, client-server, distributed operating systems and how they differ from single user operating systems. [Familiarity]
- Identify potential threats to operating systems and the security features design to guard against them. [Familiarity]
- Explain the concept of a logical layer. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 00 Overview I: Learning Outcomes (2)<sup>1</sup>

- Explain the benefits of building abstract layers in hierarchical fashion. [Familiarity]
- Describe the value of APIs and middleware. [Assessment]
- Describe how computing resources are used by application software and managed by system software. [Familiarity]
- Contrast kernel and user mode in an operating system. [Usage]
- Discuss the advantages and disadvantages of using interrupt processing. [Familiarity]
- Explain the use of a device list and driver I/O queue. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 01 Overview II: Topics<sup>1</sup>

- Types of virtualization (including Hardware/Software, OS, Server, Service, Network)
- Paging and virtual memory
- Virtual file systems
- Hypervisors
- Portable and cost of virtualization; emulation vs. isolation
- Cloud services: IAAS, PAAS and Platform APIs, SAAS
- Introduction to Scripting and REGEX.

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 01 Overview II: Learning Outcomes<sup>1</sup>

- Explain the concept of virtual memory and how it is realized in hardware and software. [Familiarity]
- Discuss hypervisors and the need for them in conjunction with different types of hypervisors. [Usage]
- Differentiate emulation and isolation. [Familiarity]
- Evaluate virtualization trade-offs. [Assessment]
- Discuss the importance of elasticity and resource management in cloud computing. [Familiarity]
- Explain the advantages and disadvantages of using virtualized infrastructure. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 02 Security & Protection: Topics<sup>1</sup>

- Overview of system security
- Policy/mechanism separation
- Security methods and devices
- Protection, access control, and authentication
- Backups

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

- Articulate the need for protection and security in an OS (cross-reference IAS/Security Architecture and Systems Administration/Investigating Operating Systems Security for various systems). [Assessment]
- Summarize the features and limitations of an operating system used to provide protection and security [Familiarity]
- Explain the mechanisms available in an OS to control access to resources [Familiarity]
- Carry out simple system administration tasks according to a security policy, for example creating accounts, setting permissions, applying patches, and arranging for regular backups [Usage]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 03 File System & FUSE: Topics<sup>1</sup>

- Files: data, metadata, operations, organization, buffering, sequential, nonsequential
- Directories: contents and structure
- File systems: partitioning, mount/unmount, virtual file systems
- Standard implementation techniques
- Memory-mapped files
- Special-purpose file systems
- Naming, searching, access, backups
- Journaling and log-structured file systems

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 03 File System & FUSE: Learning Outcomes<sup>1</sup>

- Describe the choices to be made in designing file systems. [Familiarity]
- Compare and contrast different approaches to file organization, recognizing the strengths and weaknesses of each. [Usage]
- Summarize how hardware developments have led to changes in the priorities for the design and the management of file systems. [Familiarity]
- Summarize the use of journaling and how log-structured file systems enhance fault tolerance. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 04 Addressing: Topics<sup>1</sup>

- Bits, bytes, and words
- Numeric data representation and number bases
- Representation of records and arrays

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 04 Addressing: Learning Outcomes<sup>1</sup>

- Explain why everything is data, including instructions, in computers. [Familiarity]
- Explain the reasons for using alternative formats to represent numerical data. [Familiarity]
- Describe the internal representation of non-numeric data, such as characters, strings, records, and arrays. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 05 Virtual Memory: Topics<sup>1</sup>

- Review of physical memory and memory management hardware
- Virtual Memory
- Caching
- Memory Allocation
- Memory Performance
- Working sets and thrashing

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 05 Virtual Memory: Learning Outcomes<sup>1</sup>

- Explain memory hierarchy and cost-performance trade-offs. [Familiarity]
- Summarize the principles of virtual memory as applied to caching and paging. [Familiarity]
- Describe the reason for and use of cache memory (performance and proximity, different dimension of how caches complicate isolation and VM abstraction). [Familiarity]
- Defend the different ways of allocating memory to tasks, citing the relative merits of each. [Assessment]
- Evaluate the trade-offs in terms of memory size (main memory, cache memory, auxiliary memory) and processor speed. [Assessment]
- Discuss the concept of thrashing, both in terms of the reasons it occurs and the techniques used to recognize and manage the problem. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 06 Concurrency: Topics<sup>1</sup>

- States and state diagrams
- Structures (ready list, process control blocks, and so forth)
- Dispatching and context switching
- The role of interrupts
- Managing atomic access to OS objects
- Implementing synchronization primitives
- Multiprocessor issues (spin-locks, reentrancy)

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 06 Concurrency: Learning Outcomes (1)<sup>1</sup>

- Describe the need for concurrency within the framework of an operating system. [Familiarity]
- Demonstrate the potential run-time problems arising from the concurrent operation of many separate tasks. [Usage]
- Summarize the range of mechanisms that can be employed at the operating system level to realize concurrent systems and describe the benefits of each. [Familiarity]
- Explain the different states that a task may pass through and the data structures needed to support the management of many tasks. [Familiarity]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

## Week 06 Concurrency: Learning Outcomes (2)<sup>1</sup>

- Summarize techniques for achieving synchronization in an operating system (e.g., describe how to implement a semaphore using OS primitives). [Familiarity]
- Describe reasons for using interrupts, dispatching, and context switching to support concurrency in an operating system. [Familiarity]
- Create state and transition diagrams for simple problem domains. [Usage]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 07 Synchronization & Deadlock: Topics<sup>1</sup>

- Shared Memory and Critical Section
- Consistency, and its role in programming language guarantees for data-race-free programs
- Message passing: PtPo vs Multicast, Blocking vs non-blocking, buffering.

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 07 Synchronization & Deadlock: Learning Outcomes<sup>1</sup>

- Use mutual exclusion to avoid a given race condition. [Usage]
- Give an example of an ordering of accesses among concurrent activities (e.g., program with a data race) that is not sequentially consistent. [Familiarity]
- Use semaphores to block threads [Usage]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 08 Scheduling: Topics<sup>1</sup>

- Preemptive and non-preemptive scheduling
- Schedulers and policies
- Processes and threads
- Deadlines and real-time issues

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 08 Scheduling: Learning Outcomes<sup>1</sup>

- Compare and contrast the common algorithms used for both preemptive and non-preemptive scheduling of tasks in operating systems, such as priority, performance comparison, and fair-share schemes. [Usage]
- Describe relationships between scheduling algorithms and application domains. [Familiarity]
- Discuss the types of processor scheduling such as short-term, medium-term, long-term, and I/O. [Familiarity]
- Describe the difference between processes and threads. [Usage]
- Compare and contrast static and dynamic approaches to real-time scheduling. [Usage]
- Discuss the need for preemption and deadline scheduling. [Familiarity]
- Identify ways that the logic embodied in scheduling algorithms are applicable to other domains, such as disk I/O, network scheduling, project scheduling, and problems beyond computing. [Usage]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 09 Storage, BIOS, Loader, & Systemd: Topics<sup>1</sup>

- Storage
- Storage Arrays
- BIOS
- Loader
- Systemd

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 09 Storage, BIOS, Loader, & Systemd: Learning Outcomes<sup>1</sup>

- Storage [Usage]
- Storage Arrays [Usage]
- BIOS [Usage]
- Loader [Usage]
- Systemd [Usage]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 10 I/O & Programming: Topics<sup>1</sup>

- Characteristics of serial and parallel devices
- Abstracting device differences
- Buffering strategies
- Direct memory access
- Recovery from failures
- I/O Programming
- Network Programming

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 10 I/O & Programming: Learning Outcomes<sup>1</sup>

- Explain the key difference between serial and parallel devices and identify the conditions in which each is appropriate. [Familiarity]
- Identify the relationship between the physical hardware and the virtual devices maintained by the operating system. [Usage]
- Explain buffering and describe strategies for implementing it. [Familiarity]
- Differentiate the mechanisms used in interfacing a range of devices (including hand-held devices, networks, multimedia) to a computer and explain the implications of these for the design of an operating system. [Usage]
- Describe the advantages and disadvantages of direct memory access and discuss the circumstances in which its use is warranted. [Usage]
- Identify the requirements for failure recovery. [Familiarity]
- Implement a simple device driver for a range of possible devices. [Usage]
- I/O Programming [Usage]
- Network Programming [Usage]

# The End

- ☐ This is the end of the presentation.
