# Operating Systems 2020-1

A [08-10, Rm 3114, Mo/We] — B/M [10:10-12, Rm 3114, Mo/We] — C [13-15, Rm 3114, Mo/We]

D [10-12, Rm 2307(Mo), Rm 3113(We)] — E [08-10, Rm 2307(Mo), Rm 3113(We)]

Week	Schedule	Topic	OSC10
Week 00	27 Jan - 02 Feb 2020	Overview 1, Virtualization & Scripting	Ch. 1, 2, 18.
Week 01	03 Feb - 09 Feb 2020	Overview 2, Virtualization & Scripting	Ch. 1, 2, 18.
Week 02	10 Feb - 16 Feb 2020	Security, Protection, Privacy, & C-language	Ch. 16, 17
Week 03	17 Feb - 23 Feb 2020	File System & FUSE	Ch. 13, 14, 15
Week 04	24 Feb - 01 Mar 2020	Addressing, Shared Lib, & Pointer	Ch. 9
Week 05	02 Mar - 08 Mar 2020	Virtual Memory	Ch. 10
Reserved	09 Mar - 13 Mar 2020	Q & E	
MidTerm	14-21 Mar 2020 (TBA)	MidTerm (UTS)	Subject to change.
Week 06	23 Mar - 31 Mar 2020	Concurrency: Processes & Threads	Ch. 3, 4
Week 07	01 Apr - 07 Apr 2020	Synchronization & Deadlock	Ch. 6, 7, 8
Week 08	08 Apr - 14 Apr 2020	Scheduling + W06/W07	Ch. 5
Week 09a	15 Apr - 19 Apr 2020	Storage, Firmware, Bootldr, & Systemd	Ch. 11
Week 09b	20 Apr - 26 Apr 2020	OnLine & CoLearnIng	
Week 10	27 Apr - 28 Apr 2020	Storage, Firmware, Bootldr, & Systemd	Ch. 11
Reserved	29 Apr - 05 May 2020	I/O & Programming	Ch. 12
Reserved	06 May - 10 May 2020	Q & A	
Final	11-18 May 2020 (TBA)	Final (UAS)	This schedule is subject to change.
Extra	25 Jun 2020	Extra assignment confirmation	

# STARTING POINT — <https://os.vlsm.org/>

- ❑ **Text Book** — Any recent/decent OS book. Eg. (**OSC10**) Silberschatz et. al.: **Operating System Concepts**, 10<sup>th</sup> Edition, 2018. See also <http://codex.cs.yale.edu/avi/os-book/OS10/>.
- ❑ **Resources**
  - ❑ **All In One** — [BADAk.cs.ui.ac.id:///extra/](http://BADAk.cs.ui.ac.id:///extra/) (**FASILKOM only!**).
  - ❑ **Download Slides and Demos from GitHub.com**  
<https://github.com/UI-FASILKOM-OS/SistemOperasi/>
  - ❑ **Problems** — <https://rms46.vlsm.org/2/>:  
195.pdf (W00), 196.pdf (W01), 197.pdf (W02), 198.pdf (W03),  
199.pdf (W04), 200.pdf (W05), 201.pdf (W06), 202.pdf (W07),  
203.pdf (W08), 204.pdf (W09), 205.pdf (W10).
- ❑ **Try Demos**
  - ❑ Your own Ubuntu system.
  - ❑ Ubuntu on VirtualBox, or VMWare, or ...
  - ❑ Windows Subsystem for Linux (**Windows 10 only!**).
  - ❑ SSH to [BADAk.cs.ui.ac.id](http://BADAk.cs.ui.ac.id) (**FASILKOM only!**).

# Agenda

- 1 Start
- 2 Schedule
- 3 Agenda
- 4 Week 07
- 5 Week 07: Synchronization
- 6 The Critical Section Problem
- 7 Peterson
- 8 Semaphore
- 9 Deadlock and Starvation
- 10 99-myutils.h
- 11 99-myutils.c
- 12 00-thread

## Agenda (2)

- 13 01-thread
- 14 02-prodkon
- 15 03-readwrite
- 16 04-readwrite
- 17 05-alu
- 18 06-balap
- 19 07-sudokuSV
- 20 08-mainDadu
- 21 09-rpsls
- 22 10-kiriklanan
- 23 11-thread
- 24 EXTRA: 30-add1sub1.c
- 25 EXTRA: 31-add1.c
- 26 EXTRA: 32-sub1.c
- 27 The End

# Week 07 Synchronization & Deadlock: Topics<sup>1</sup>

- Shared Memory and Critical Section
- Consistency, and its role in programming language guarantees for data-race-free programs
- Message passing: PtPo vs Multicast, Blocking vs non-blocking, buffering.

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 07 Synchronization & Deadlock: Learning Outcomes<sup>1</sup>

- Use mutual exclusion to avoid a given race condition. [Usage]
- Give an example of an ordering of accesses among concurrent activities (e.g., program with a data race) that is not sequentially consistent. [Familiarity]
- Use semaphores to block threads [Usage]

---

<sup>1</sup>Source: ACM IEEE CS Curricula 2013

# Week 07: Synchronization

- Reference: (OSC10-ch06 OSC10-ch07 OSC10-ch08 demo-w07)
- **Cooperating Process = ??? Race Condition = ???**
- **The SYNC Game**
  - Three (3) participants:  $A_1$  (left), B (middle), and  $A_2$  (right).
  - Each participant: His/her weekly **MEMO** + a ballpoint/pencil.
  - **This is not a RACING contest!**
  - Objective: Count, how many "I/O" lines per participant per time.
  - Communication Protocol: CSMA/CD (=listen before talk).
  - Each participant: **EXECUTE** this following (**NO need to hurry!**).
    - $A_1$  writes "1000" to his/her memo.
    - $A_2$  writes "2000" to his/her memo.
    - **REPEAT:**
      - Random Delay (1-2 seconds).
      - $A_{1or2}$  notify B:  $A_{1or2}$  number.
      - B writes that number to his/her memo.
      - $A_{1or2}$  requests B's number.
      - $A_1$  add one (+1) and writes the number to his/her memo.
      - $A_2$  sub one (-1) and writes the number to his/her memo.
- Q: What is the last value/number of each participant?

# The Critical Section Problem

- Requirements with nonzero speed assumption:
  - Mutual Exclusion
  - Progress
  - Bounded Waiting
- Peterson's Solution
- Semaphores
- Classical Problems
  - Bounded-Buffer Problem
  - Readers and Writers Problem
  - Dining-Philosophers Problem
- Resource and Allocation Graph

Figure: Request and Holding

# Peterson's Solution

## Process 0

flag[0]=

turn=

```
do {  
    flag[0] = true  
    turn = 1  
    while (flag[1] && turn == 1)  
        (do nothing);  
    [CRITICAL SECTION];  
    flag[0] = false  
    [REMAINDER SECTION];  
} while(true);
```

## Process 1

flag[1]=

```
do {  
    flag[1] = true  
    turn = 0  
    while (flag[0] && turn == 0)  
        (do nothing);  
    [CRITICAL SECTION];  
    flag[1] = false  
    [REMAINDER SECTION];  
} while(true);
```

# Semaphore

- Dijkstra's Seinpalen (1963): Probeer (Try) en Verhoog (+1)
- Semaphore: Wait(W) and Signal(S)
- Linux System Calls: `sem_init()`, `sem_wait()`, and `sem_post()`

```
# Semaphore (Seinpalen)
```

```
# Wait (Probeer)
```

```
wait(S) {  
    while (S <= 0)  
        ; // busy wait  
    S--;  
}
```

```
# Signal (Verhoog)
```

```
signal(S) {  
    S++;  
}
```

# Deadlock and Starvation

- Deadlock Characterization
  - Mutual exclusion
  - Hold and wait
  - No preemption
  - Circular wait
- Banker's Algorithm
- Deadlock Prevention
- Deadlock Avoidance
- How do Operating Systems handle Deadlocks?

## **IGNORE THE PROBLEM!**

Pretending that deadlocks never occur  
Just **RESET/REBOOT** it  
This is how they **DO IT!**

```
/**
