Week	Schedule	Topic	OSC10
Week 00	27 Jan - 02 Feb 2020	Overview 1, Virtualization & Scripting	Ch. 1, 2, 18.
Week 01	03 Feb - 09 Feb 2020	Overview 2, Virtualization & Scripting	Ch. 1, 2, 18.
Week 02	10 Feb - 16 Feb 2020	Security, Protection, Privacy,	Ch. 16, 17
		& C-language	
Week 03	17 Feb - 23 Feb 2020	File System & FUSE	Ch. 13, 14, 15
Week 04	24 Feb - 01 Mar 2020	Addressing, Shared Lib, & Pointer	Ch. 9
Week 05	02 Mar - 08 Mar 2020	Virtual Memory	Ch. 10
Reserved	09 Mar - 13 Mar 2020	Q & E	
MidTerm	14-21 Mar 2020 (TBA)	MidTerm (UTS)	Subject to change.
Week 06	23 Mar - 31 Mar 2020	Concurrency: Processes & Threads	Ch. 3, 4
Week 07	01 Apr - 07 Apr 2020	Synchronization & Deadlock	Ch. 6, 7, 8
Week 08	08 Apr - 14 Apr 2020	Scheduling + W06/W07	Ch. 5
Week 09a	15 Apr - 19 Apr 2020	Storage, Firmware, Bootldr, & Systemd	Ch. 11
OCL	20 Apr - 26 Apr 2020	OnLine & CoLearnIng	
Week 09b	27 Apr - 28 Apr 2020	Storage, Firmware, Bootldr, & Systemd	Ch. 11
Week 10	29 Apr - 05 May 2020	I/O & Programming	Ch. 12
Reserved	06 May - 10 May 2020	Q & A	
Final	11-18 May 2020 (TBA)	Final (UAS)	This schedule is
Extra	25 Jun 2020	Extra assignment confirmation	subject to change.

STARTING POINT — https://os.vlsm.org/

☐ **Text Book** — Any recent/decent OS book. Eg. (**OSC10**) Silberschatz et. al.: **Operating System Concepts**, 10th Edition, 2018. See also http://codex.cs.yale.edu/avi/os-book/OS10/. Resources All In One — BADAK.cs.ui.ac.id:///extra/(FASILKOM only!). Download Slides and Demos from GitHub.com https://github.com/UI-FASILKOM-OS/SistemOperasi/ ☐ **Problems** — https://rms46.vlsm.org/2/: 195.pdf (W00), 196.pdf (W01), 197.pdf (W02), 198.pdf (W03), 199.pdf (W04), 200.pdf (W05), 201.pdf (W06), 202.pdf (W07), 203.pdf (W08), 204.pdf (W09), 205.pdf (W10). Try Demos Your own Ubuntu system. ☐ Ubuntu on VirtualBox, or VMWare, or . . . ☐ Windows Subsystem for Linux (Windows 10 only!). ☐ SSH to BADAK.cs.ui.ac.id (FASILKOM only!).

Agenda

- Start
- 2 Schedule
- Agenda
- 4 Week 10
- 5 Week 10: I/O & Programming
- **6** I/O
- PCH: Platform Controller Hub
- 8 Sockets
- 10-server
- 11-client
- 1 OUTPUT: 10-server 11-client
- 12-clisvr

Agenda (2)

- OUTPUT: 12-clisvr
- 14 50-get-put 51-get-put-loop
- 15 52-open-close
- 16 53-file-pointer
- 1 54-write
- 18 55-write
- 19 56-copy
- 20 57-dup
- 21 58-dup2
- 22 59-io
- 60-readwrite
- 24 The End

Week 10 I/O & Programming: Topics¹

- Characteristics of serial and parallel devices
- Abstracting device differences
- Buffering strategies
- Direct memory access
- Recovery from failures
- I/O Programming
- Network Programming

¹Source: ACM IEEE CS Curricula 2013

Week 10 I/O & Programming: Learning Outcomes¹

- Explain the key difference between serial and parallel devices and identify the conditions in which each is appropriate. [Familiarity]
- Identify the relationship between the physical hardware and the virtual devices maintained by the operating system. [Usage]
- Explain buffering and describe strategies for implementing it. [Familiarity]
- Differentiate the mechanisms used in interfacing a range of devices (including hand-held devices, networks, multimedia) to a computer and explain the implications of these for the design of an operating system. [Usage]
- Describe the advantages and disadvantages of direct memory access and discuss the circumstances in which its use is warranted. [Usage]
- Identify the requirements for failure recovery. [Familiarity]
- Implement a simple device driver for a range of possible devices.
 [Usage]
- I/O Programming [Usage]
- Network Programming [Usage]

Week 10: I/O & Programming

- Reference: (OSC10-ch12)
- Overview
- I/O Hardware
- Application I/O Interface
- Kernel I/O Subsystem
- Transforming I/O Requests to Hardware Operations
- STREAMS
- Legacy Linux I/O Scheduling Algorithm.
 - Deadline Scheduler
 - Completely Fair Queueing (CFQ)

I/O(1)

- Direct I/O vs. Memory Mapped I/O
- Interrupts: Non Maskable (NMI) vs Maskable (MI)
- DMA: Direct Memory Access
- I/O Structure:
 - Kernel (S/W).
 - I/O (S/W: Kernel Subsystem)
 - Driver (S/W)
 - Controller (H/W)
 - Device (H/W)
- I/O Streams
 - APP
 - HEAD
 - MODULES
 - DRIVER
 - H/W.

I/O(2)

- I/O Interface Dimensions
 - Character-stream vs. Block;
 - Sequential vs. Random-access;
 - Sharable vs. Dedicated;
 - Parallel vs. Serial;
 - Speed;
 - Read Write Read Only Write Only.
 - Synchronous vs. Asynchronous;
 - Blocking vs. Non-Blocking.
- Where should a new algorithm be implemented?
 - APP?
 - Kenel?
 - Driver?
 - Controller?
 - HW?

PCH: Platform Controller Hub

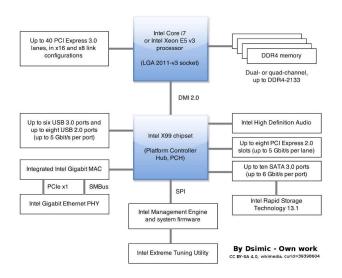

Figure: PCH: Platform Controller Hub

Some Terms

- PCH: Platform Controller Hub
 - The successor of north/south-bridge architecture chipsets.
- PCIe: Peripheral Component Interconnect Express
 - 1 lane = dual simplex channel (1x); 2 lanes = 2x; etc.
 - 40 lanes = 8 GTs (GigaTransfers per second).
 - Configurations: 8x and 16x.
- DDR4 SDRAM (single/dual/quad channel(s))
 - Double Data Rate Fourth-generation Synchronous Dynamic Random-Access Memory: $2 \times DDR2$ (DDR2 = $2 \times DDR$ (DDR = $2 \times SDRAM$)). Eg. DDR4-3200 (8x SDRAM); Memory Clock: 400 MHz; Data Rate: 3200 MT/s; Module Name PC4-25600; Peak Transfer Rate: 25600 MB/s,
- DMI 2.0 (Direct Media Interface): 4x.
- SMB: System Management Bus
- SPI: Serial Peripheral Interface, a de facto standard bus.
- SATA: Serial AT Attachment. Eg. SATA $3.2 \approx 2$ GB/s.
- 1 KB (KiloByte) = 1000 bytes 1 KiB (Kibibyte) = 1024 bytes¹

Sockets

Sockets

- atoi()
- accept()
- bind()
- connect()
- exit()
- fprintf()
- getenv()
- gethostbyname()
- htons()
- listen()
- memcpy()
- memset()

Sockets

- Sockets
 - perror()
 - sizeof()
 - socket()
 - snprintf()
 - strchr()
 - strcmp()
 - strncpy()
 - strlen()
 - read()
 - write()

10-server

/*
* (c) 2007 Tadeus Prastowo and Rahmat M. Samik-Ibrahim.
* (c) 2017 Rahmat M. Samik-Ibrahim.
* This is free software. It was copased from the net and hacked until
* it works. Feel free to copy and/or modify and/or distribute it,
* provided this notice, and the copyright notice, are preserved.
* REV01 Wed Nov 8 20:00:02 WIR 2017
 * START 2007
* This program serves as both a client and a server. Three modes of
 * operation are available:
* - initiating mode
* - bridging mode
* - terminating mode
* The following are how to run thisprogram for each mode:
* - Initiating mode: client server null ANOTHER HOST ANOTHER PORT
  - Bridging mode: client_server CURRENT_PORT_ANOTHER_HOST_ANOTHER_PORT
  - Terminating mode: client_server CURRENT_PORT null null
* The program having the initiating mode MUST run last after all other
* instances of this program with other operational modes has been started.
* In initiating mode, this program just simply sends a hello message to
* another instance of this program that operates either as a bridge or
* as a terminator that this program points to as specified in
* ANOTHER HOST and ANOTHER PORT. After that this program will quit
* without printing out any message.
*/
```

12-clisvr (2)

```
/*
* In bridging mode, this program just simply waits for an incoming hello
* message in CURRENT PORT. Once it receives a hello message, it prints
* out the message in a certain format. Next, this program forwards the
* modified message to another instance of this program that acts either as
* a bridge or as a terminator that this program points to as specified
* in ANOTHER HOST and ANOTHER PORT. After that this program will quit.
* In terminating mode, this program just simply waits for an incoming hello
 * message in CURRENT PORT. Once it receives a hello message, it prints out
 * the message in a certain format, and then quits.
* The following illustrates the idea above:
* 192.168.10.18 (alvin)
* $ ./client_server 8888 localhost 7777
* 192.168.10.18 (user)$
* $ ./client server 7777 null null
* 192.168.12.17 (eus)$
* $ ./client_server null 192.168.10.18 8888
* The print out will be:
* 192.168.10.18 (alvin):
 * From eus to alvin: Hello
* 192.168.10.18 (user):
 * From eus to alvin to user: Hello
 * /
